# What Did UrbanStyle's Data Reveal?

*Data Sources: Sales • Customers • Products • Inventory*

## Key Findings

- **+19.1%**, Overall revenue growth in 2024 vs 2023.
- **31.25%**, Share of customer revenue generated by just 206 VIP customers.
- **+37.9%**, Online revenue growth in 2024 vs 2023.
- **231 records**, Inventory at or below reorder points, requiring review.

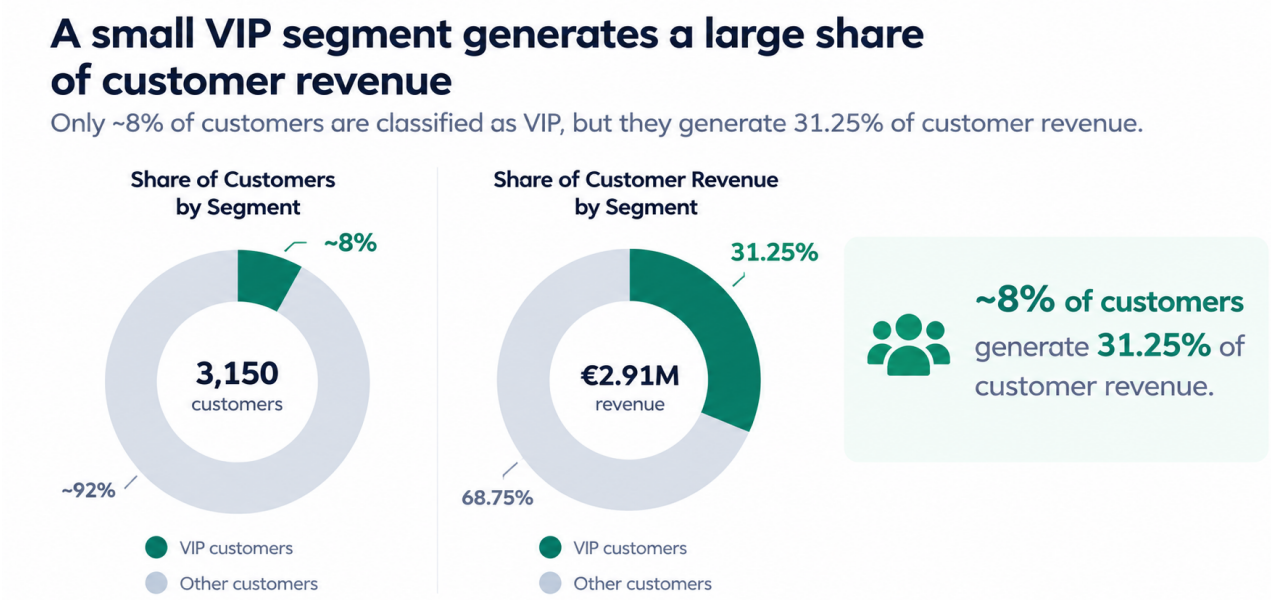

## Biggest Surprise

Tartu grew by 13% in 2024, despite expectations of a decline.

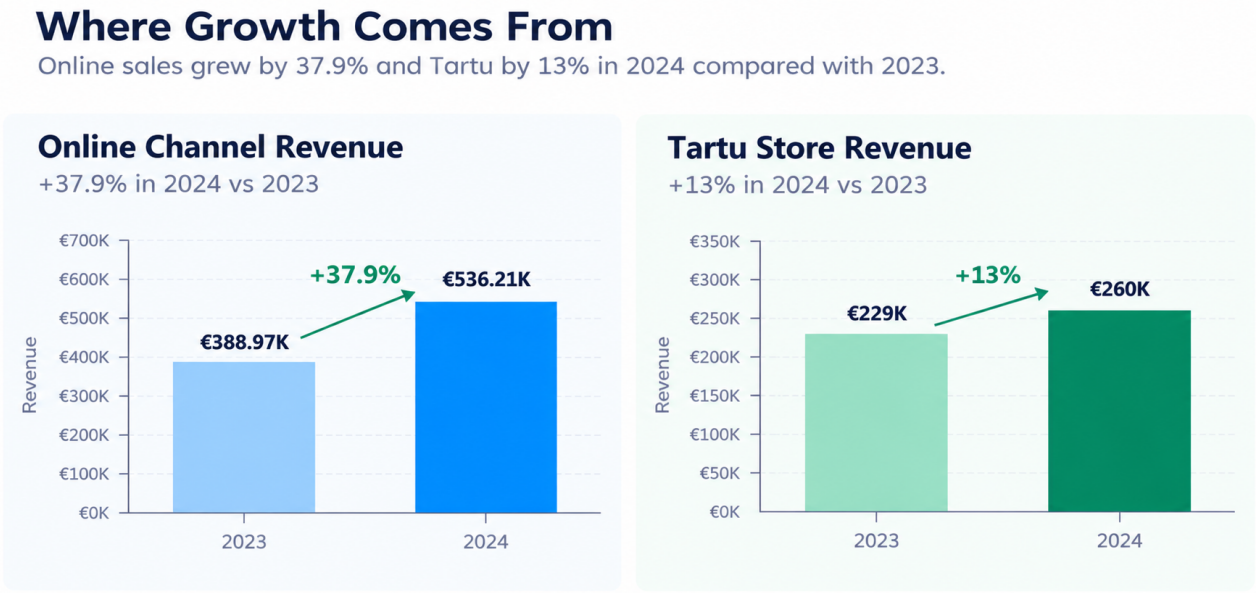

KEY TAKEAWAY

**Data helps us challenge assumptions and identify opportunities.**

# Visualisations

*A small VIP segment (~8% of customers) generates 31.25% of customer revenue.*

*Online (+37.9%) and Tartu (+13%) were the two fastest-growing revenue sources in 2024.*

# What We Recommend

*Three data-driven recommendations, built on what you just saw.*

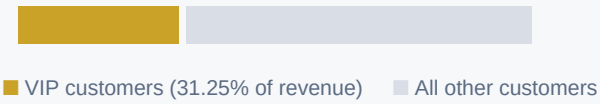

## 1 Keep investing in the online channel

Online revenue grew 37.9% in 2024, the fastest of any channel, with no physical store costs behind it. Momentum like this deserves more budget, not less.

## 2 Protect the VIP segment

Just 206 customers (about 8% of the base) generate 31.25% of customer revenue. That revenue is concentrated in very few hands, a dedicated loyalty programme would protect it.

## 3 Resolve the 231 at-risk inventory items

231 products are sitting at or below their reorder point. With online and Tartu both growing, running out of stock there would turn today's growth story into tomorrow's missed sales.

**231**

inventory records at or below reorder point

# How Did AI Help Us?

*Over the last ten weeks, we didn't just use AI to write random code, we used it as a steady partner to help us move faster across our entire data stack.*

STEP 1 OF 3 · EARLY WEEKS

**DATABASE WORK**

During our early database work, it helped us untangle messy SQL joins and structure our cleaning scripts.

STEP 2 OF 3 · MID-PROJECT

**AUTOMATION**

When we moved into Python and built our automated API pipelines and Pandas dataframes, AI was a lifesaver for troubleshooting syntax errors and looping structures.

STEP 3 OF 3 · FINAL STRETCH

**ANALYSIS & STORY**

It helped us sanity-check our RFM customer segmentation logic and polish the narrative flow for our final board meeting presentation.

**OUR BIG LESSON LEARNED**

**AI is incredible at accelerating the heavy lifting, like drafting scripts or fixing syntax, but it doesn't know our business context. We had to think critically, verify every output ourselves, and make sure the final story actually made sense for UrbanStyle.**
